EDUCATION

Stanford University

Stanford, CA

Master of Science, Computer Science (Artificial Intelligence Track)

June 2026

Bachelor of Science, Computer Science (Computational Biology Track)

June 2025

Bio/Health Coursework: Algorithms for Computational Molecular Biology, Computational Human Genomics, Modeling Biomedical Systems, Biodesign Fundamentals, Biochemistry & Molecular Biology, Genetics, Cell Biology, Physiology

AI/ML Coursework: Mining Massive Datasets, AI: Principles and Techniques, NLP with Deep Learning, Deep Learning for CV, Reinforcement Learning, Decision Making Under Uncertainty

EXPERIENCE

Zingage

New York, NY

AI Engineer

June 2026-Present

- Building an in-house audio evaluation set for voice AI agents
- Owning the rollout of a new ranking/recommendation system, from design iterations and shadow runs to A/B testing and full rollout

Stanford Language Data and Reasoning Lab

Stanford, CA

Graduate Research Assistant

October 2025-April 2026

- Built a recommendation system utilizing knowledge graphs
- Developed advanced evaluation techniques for an AI retail assistant through LLM-simulated user dialogue

Verkada

San Mateo, CA

Software Engineer Intern

June-September 2025

- Created an automated workflow for Alarm License Certificate generation using Temporal
- Built a voice agent that leverages real-time LLMs for speech-to-speech capabilities on the Alarms Response team

Bioinformatics Institute, A*STAR

Singapore

SIPGA Internship Awardee

June-September 2024

- Developed a Next.js web application from the ground up, integrating an H&E histopathology tissue segmentation AI model for cancer cell detection with a custom visualization tool
- Integrated AWS (Amplify, DynamoDB, S3, SageMaker) for hosting, the ML pipeline, and backend database operations

Dropbox

Remote

Software Engineer Intern

June-September 2023

- Implemented bulk actions for Dropbox Enterprise as a full-stack project using TypeScript, React, and Python
- Contributed to the redesign and migration of the Enterprise Members page with the Design team and PM

OXOS Medical

Atlanta, GA

Software Engineer Intern

June-August 2022

- Developed multiple computer vision models for an X-ray device using Python and TensorFlow, including key point detection and image segmentation models
 - Managed the entire ML pipeline, including data collection, preprocessing, model research, and model development
-

-

PROJECTS

Offline RL for Prior Authorization

Python, PyTorch

- Modeled insurance policy retrieval as an MDP; CQL agent reached 92% decision accuracy (+30 pts over the best fixed-K baseline), while IQL matched baseline accuracy with 44% fewer retrieval steps

CoST: Code Switching Translation Data Augmentation Method

Python, PyTorch

- Developed a machine translation-based data augmentation method for code-switched text using a fine-tuned mT5
- Improved CoSDA code-switched text accuracy on XNLI by more than 2x

GridFlow Smart Traffic Light

Python, PyTorch, SUMO

- Built a smart traffic light using YOLOv5 car detection and Q-learning/DQN to dynamically optimize intersection flow
-

SKILLS

- **Programming Languages:** Python, C++, C, Java, TypeScript, JavaScript, Go
- **Tools:** PyTorch, TensorFlow, AWS, Git, Temporal, React.js, Next.js, Node.js, MySQL
- **Languages:** English (native), Mandarin Chinese (intermediate)
